

# YOUR MOBILE RECORDING & PRODUCTION STUDIO

## CI2

ADVANCED INTEGRATION USB STUDIO

AI KNOB

## CUBASE AI5

Hardware most skillfully meets software by combining the best of two worlds with the CI2 Advanced Integration USB studio and Cubase AI 5, the dedicated version of Cubase 5.

As the name implies, the CI2 houses two major functions. There's the two-channel XLR/TRS combo interface equipped with two sophisticated microphone preamps and phantom power, one HI-Z for direct guitar input and a footswitch connector for Interactive Recording.

This is seconded by the controller section featuring the innovative AI Knob that provides intuitive control due to seamless integration into Cubase.

You now have all the tools in a single box to help you with whatever recording and production project you may have in mind.

Cubase AI 5 is a lean Cubase version tailored to users looking to record their music without additional bells and whistles.

Based on the same core technologies as the Steinberg Cubase 5 Advanced Music Production System, the Cubase AI 5 offers great tools for composition, recording, editing and mixing. Together with the CI2, Cubase AI 5 provides a full system solution for recording music in studio quality.
